Database of CAB SERVICE company

Problem statement:

Our aim is to store data of a company which provides cab service.

●Details of customers

●Details of employees

●Details of other non living assets(vehicles)

●Billing details

●Booking details

The company have different branches at different places with unique branch ID.

Every branch has the same department name for same department number.

Customer have unique customer ID and can book cabs of their choice(if available).

Customer can book one or more vehicle at a time.

Each booking has a unique booking id and a unique bill is generated for each booking.
